## Projects

---

- **SHOWROOM MANAGEMENT SYSTEM**  
**Module: Inventory management**
  - As part of Inventory Management, responsible for maintaining a comprehensive database of all cars in the showroom.
  - Tasks will include tracking car details such as make, model, year, color, VIN, mileage, and price.
  - You will add new cars to the inventory and update existing ones as needed.
  - Monitoring available stock and receiving alerts for low stock levels will also be part of your responsibilities.
  - You will categorize cars based on different attributes such as new, used, or on-sale.
- Module: Customer management**
  - In Customer Management, involve keeping track of customer information, including contact details, preferences, and purchase history.
  - Assign unique identifiers to each customer for easy access and communication.
  - Capturing customer interactions and feedback to enhance customer engagement will be part of your duties.
  - Additionally, I'll maintain records of customer inquiries and follow-up activities to ensure excellent customer service.

**Technology used:** Jsp,JavaScript, Java, Springboot, MySql

- **SHOWROOM MANAGEMENT SYSTEM**

**Module: Sales Management**

- As part of Sales Management, I will be responsible for generating quotes for customers based on their preferences and selected cars.
- I will create sales orders and process payments securely, ensuring a smooth transaction process for customers.
- Includes generating sales invoices and receipts, which are essential for documenting sales transactions.
- Responsible for keeping a history of all sales transactions for future reference, aiding in reporting and analytics.

**Module: Service Management**

- In Service Management, role involves scheduling appointments for car services, such as maintenance, repairs, and inspections.
- Track the service history of each car and plan upcoming services to ensure timely maintenance.
- Generating service invoices for completed services is another crucial task in Service Management.
- Role in notifying customers about upcoming service appointments, enhancing their overall experience with the car showroom.

Technology used: Jsp, JavaScript, Java, Springboot, MySql
